

PARUS

Plant Light

QUICK GUIDE

GUARANTEE CERTIFICATE AND USER INSTRUCTIONS

Model: PGL-Lucis

Thank you for choosing a PARUS Plant Light.

To ensure correct operation and performance this product has been carefully inspected and tested.

Terms of guarantee:

Your Plant Light is covered by a two-year limited guarantee.

This guarantee applies from the date of purchase shown on your receipt. In the event of a guarantee claim you should contact your retailer where the product was purchased.

This guarantee does not apply if the lamp has been:

- Connected to an external dimmer
- Connected to a supply with the wrong voltage
- Used outside the recommended temperature range
- Subjected to mechanical damage, e.g. dropped
- Dismantled for troubleshooting or repair

Read the user instructions before you use this lamp.

Save the instructions for future reference.

Warning: Before you start using the light – read and follow these instructions:

- This lamp is not intended for outdoor use
- Temperature range: $-20^{\circ}\text{C} \pm 40^{\circ}\text{C}$
- Make sure your hands are dry before installing the lamp
- The lamp must be well ventilated; it must not be installed in a sealed enclosure
- Do not look directly at the lamp when it is switched on
- If you handle the transformer carelessly while connecting it you could get an electric shock.
- The frame of the lamp will get hot ($35^{\circ}\text{C} \pm 40^{\circ}\text{C}$) after a period of use. This is the normal operational temperature
- If electrical installation work is required to install the lamp, this has to be carried out by a qualified electrician
- Do not use the lamp if; it does not light up; if it starts flashing; or if it only produces weak illumination.
- In the event of a defect, turn off the lamp immediately. Never attempt to repair the lamp yourself as this could cause serious damage and voids the guarantee.

1. General

Many plants come from parts of the world where the daily rhythm and light intensity differ from those in our latitude. This means that the correct lighting is especially important when cultivating plants indoors. By using the PARUS Plant Light you can grow herbs and plants indoors and enhance the indoor environment at the same time.

2. Operation

A Plant Light consists of a light source (LED) that produces light in wavelengths that are chosen to encourage plants to grow and thrive. The Lucis has been developed to give your plants important lighting in the right wavelengths to make your favorite plants thrive and grow well.

3. Technical data

Model: PGL-Lucis	Weight: 0,5kg
Voltage: 90~240 V 50/60 Hz (transformer)	PPFD* (250 mm): 75 μ mol
Operating voltage of LED bulb: 24 V DC	IP class: IP 54 Lifetime: \geq 50,000 hours
Light spread: 120°	Light color: White
Power: 22W	Frame: White Aluminum
Includes: Dimming. Light Frame	

*PPFD is a measure of the useful photosynthetic radiation

4. Care and storage:

Store the lamp and packaging out of reach of children.

There are no user-serviceable parts inside the LED lamp.

Waste disposal: This lamp should be treated as electronic waste.

5. Assembly and installation

- Put the light frame together as described in the pictures below
- Use the supplied chain to hook the light onto the frame
- Connect the cable to the transformer
- Plug the transformer into a wall socket.
- Position the Lucis on a level surface

6. Positioning

Position the lamp in a suitable location indoors where the indoor temperature is between 16 and 26°C. The ideal conditions for your plant are a well-ventilated area with a temperature of 18–24°C and humidity level of at least 50%.

7. Using the Dimmer

When you are germinating your seeds no dimming is required. Seedlings are, depending on the plant type, more sensitive to overexposure of the light. Dim the light when your plants are giving signals like browning or curling leaves.
